Every licensed home in Arizona, and a team that calls them for you.

Your liaisons are working from memory. They can name twelve homes in Mesa. There are around 2,600 licensed homes in the state, and the rest of that territory has never been called.

This page answers the questions in the order a buyer asks them. Nothing on it is a claim we cannot show.

01 What is this, and how does it work?
02 Do I have this problem?
03 Who does the calling, and what do we get back?
04 What does it look like in the field?
05 How does it fit what we already run?
06 What does it cost, and how do we start?

01

What is this, and how does it work?

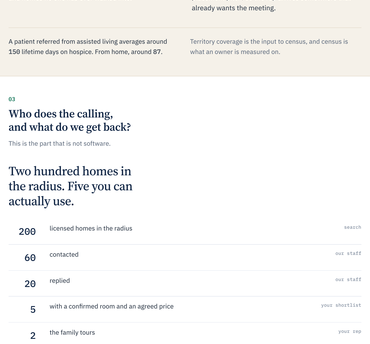

Plainly, before any argument.

ElderLogic is a placement and outreach platform for hospice teams in Arizona, sold as a subscription with a per-user licence. The software finds the homes. Our own staff call them.

01	**Assessment**	One form creates the client record, the power of attorney record and the placement search. — your team
02	**Search**	Every licensed home in the radius comes back with its published state record. — platform
03	**Calls**	We read the record, contact the homes, confirm a room and agree a price. — our staff
04	**Shortlist**	Your team receives the homes that will take this patient. — our staff
05	**Pre-tour**	The shortlist becomes a routed day on a phone, with a short form at each stop. — your rep
06	**Family route**	The same route goes to the family and opens in Google Maps. — the family

Plate 1 The map. Every licensed senior living home in the Phoenix metropolitan area. desktop

02

Do I have this problem?

Ask a liaison how many homes they can name.

~2,600

Licensed senior living homes in Arizona, held with their published record.

AZDHS · refreshed monthly

12

Homes a liaison can usually name in a territory the size of Mesa.

Homes decide which hospice gets called when a resident starts declining. A liaison can only build that relationship with homes they know exist. The rest of the territory has open rooms, homes that would refer, and homes no one has ever walked into.

Select an area on the map and every licensed home inside it comes back with contact details and its published record, ordered into a route for one day. Before the visit we call those homes with your placement pitch, so the rep arrives somewhere that already wants the meeting.

A patient referred from assisted living averages around 150 lifetime days on hospice. From home, around 87.

Territory coverage is the input to census, and census is what an owner is measured on.

03

Who does the calling, and what do we get back?

This is the part that is not software.

Two hundred homes in the radius. Five you can actually use.

200	licensed homes in the radius	search
60	contacted	our staff
20	replied	our staff
5	with a confirmed room and an agreed price	your shortlist
2	the family tours	your rep

Open question for the client: are these figures typical, or one particular search? A provenance line replaces this box before launch.

ONE ASSESSMENT

Creates the client record, the power of attorney record and the placement search together. Only the critical fields are required, so the search goes out the same day.

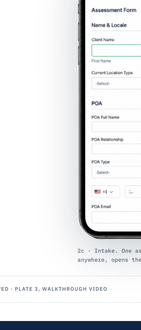

THE STATE RECORD

Licensing, inspections, violations and enforcement as published by AZDHS, not only current status. One click opens the official file.

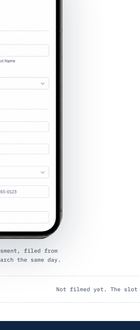

BLACKLISTING

A home rejected after a visit stays out of every future search, for everyone in your organisation.

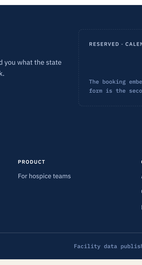

Plate 2 The shortlist becomes a routed day. Everything below happens on a phone. mobile

2a · The route. Stops in order, re-ordered when the day changes. Navigation, room details, the state record and a short form at each one.

2b · Territory. A rep sets a date, a time and an area. The homes inside it come back as a route.

2c · Intake. One assessment, filed from anywhere, opens the search the same day.

RESERVED · PLATE 3, WALKTHROUGH VIDEO

Not filmed yet. The slot stays.

Bring an address you work.

We will run the radius live and read you what the state has published on what comes back.
